

Our Vision

A healthy happy supportive community living in a clean sustainable environment

Our Mission

To promote the adoption of Regenerative Practices to help the farmers and residents of Hume to adapt to farming and rural city life, in times of drought and rising temperatures in a way that will improve the environment, create new jobs and build the community.

To realise its vision and achieve its mission, Community Voice for Hume has created a program of work called: “Building Hume’s Future Together”

The program aligns with existing Council and NSW Regional plans, especially the Regional Community Strategic plan and the Council’s Climate Change Risk Assessment and Adaptation plan.

The first project under the above program is “Grow Goulburn Mulwaree Farms and Gardens”.

Objectives of the program and project are:-

- To generate clean and sustainable jobs
- To turn Goulburn Mulwaree from being a net emitter of carbon to a negative carbon position
- To build climate resilience across the community, starting with the disadvantaged
- To drive social sustainability, especially improved mental health, by connecting people together in socially beneficial activities
- To work with other like-minded organisations in the achievement of the above locally and beyond
